

Six Google Search Tips

**As developers, we
use **Google Search** to
solve our problems
on a daily basis.**

**However, many people
may not be using it to
its full potential...**

1) Quotes

“Python 3.10 Download”

Use quotes to search for a phrase exactly as you typed it.

2) Hyphen

Python -snake

**Use a hyphen to exclude words,
useful when searching something
with an ambiguous meaning.**

3) Site

Python site:python.org

Use *site:* to search for content only on a specific website.

4) Asterisk

*** Coding projects**

Use an asterisk to leave a placeholder that will be filled by the search engine.

5) Filetype

Coding filetype:PDF

Use *filetype:* to search for a specific file type you need.

6) Range

Tiobe index 2019..2021

Use two periods to define a range and limit your search to it.
